

The Edsviken design was created by the architect and designer trio Claesson Koivisto Rune in collaboration with Almedahls. It originates from an architect project where the building's shape has been used to create this pattern.

The design is available as both translucent and blackout fabric for roller blinds as well as drapery fabrics. The textiles complement each other in offering various solutions for daylight control and interior decoration. Almedahls offer a wide range of textile materials for architects to create a caring environment and creative meeting points.

We use the most environmentally friendly flame retardant treatment on the market, which is based on nitrogen and phosphorus chemicals. We do not use any bromine, chlorine nor antimony in our coatings. All fabrics are PVC free. Our flame retardant collection offers uni-colours, prints and textures. The fabrics are registered for Ökotex.

the
difference
between

Sometimes the difference is obvious. Sometimes it can be found in the intervening space, between the lines. Between light and dark, warmth and cold. Between sunlight and shade, the open and the closed. Between indoors and outdoors, the secure and the insecure. Almedahls makes the difference. www.almedahls.se
